

Pfizer: a Partner for Better Health

Founded in 1849, Pfizer Inc is the world's largest healthcare company; dedicated to helping both people and animals live longer, happier, healthier lives. Every day we help 38 million patients, employ more than 120,000 colleagues, utilize the skills of more than 12,000 medical researchers, and work in partnership with governments and other healthcare providers to treat and prevent illnesses—adding both years to life, and life to years.

For over 150 years, Pfizer has been a pioneer in the field of human health. Our first product was santonin, which treated intestinal parasites in humans. During World War II, Pfizer developed a technique for the mass production of penicillin, which saved the lives of tens of thousands of Allied servicemen. Pfizer has a proud past, and is building a promising future based on the most robust pipeline in the pharmaceutical industry.

Pfizer Global Research & Development (PGRD), Pfizer's discovery and development division, is the world's largest privately funded biomedical research organization and one of the finest research institutions in the world. Pfizer conducts hundreds of research projects across 18 therapeutic areas—more than any other company.

Links with more than 250 partners in academia and industry strengthen our position in science and biotechnology by providing access to novel research and development tools and key data on emerging trends in medical science and clinical practice. Our focus is clear — to discover and deliver an ever-increasing variety of medicines to significantly enhance the health and quality of life for people and animals around the world.

We accomplish this with multidisciplinary teams of scientists and technology professionals who perform pioneering science, are

highly innovative and add to medical knowledge in many disease areas. Our search for new treatments spans hundreds of research projects at any given time. PGRD is responsible for many recognized drug breakthroughs, including Lipitor (for high cholesterol), Zithromax (an oral antibiotic), Norvasc (for hypertension), and Viagra (for erectile dysfunction).

In the realm of animal health, Pfizer has brought forth such breakthroughs as Revolution, which treats both internal and external parasites in dogs and cats. Our consumer products line includes such household names as Listerine, Ben-Gay, Visine, Roloids and many more.

Beyond the quest to discover valuable new medicines, Pfizer is taking new actions to build a healthier world, reaching out to more people and organizations as partners in public health and disease prevention. We share the latest health information with patients, physicians and other healthcare stakeholders to enable them make the best possible health care decisions.

What's more, each working day Pfizer donates more than \$2 million in medicines to people in need around the world, including more than 110,000 people living with HIV/AIDS in more than 24 countries. Specific initiatives include the Pfizer Global Health Fellows Program, which supports Pfizer colleagues in short and long term assignments to assist non-governmental organizations (NGOs) that are dedicated to fighting the world's HIV/AIDS epidemic and other deadly diseases in developing countries, and the Diflucan Partnership Program, in which Pfizer works together with governments and NGOs to provide its antifungal medicine Diflucan (fluconazole) to people living with HIV/AIDS in Less Developed Countries (LDCs) and sub-Saharan Africa.

The Diflucan Partnership Program was first implemented in South Africa in April 2001, and includes not only the provision of Diflucan through the government sector, but also the training of health professionals in the diagnosis and treatment of opportunistic infections. Through the Program, Pfizer continues its drive to deliver life-saving medications to all corners of the globe.

Pfizer will continue discovering new medicines and cures, with the goal of becoming the company that contributes more to human health than any company in history. To find out more, please visit us at www.pfizer.com.
